EXPERIENCE

ChiroHD

Software Engineer

Remote

Apr 2024 – Present

- Architected automated ERA ingestion pipelines that parse X12 835 remittance files into structured EOB records, eliminating manual data entry for 1000+ chiropractic clinics and improving billing accuracy
- Built a queue-based Twilio MMS processing system using SQS and Lambda to manage burst traffic and track patient opt-in/out status, ensuring compliant and reliable clinic messaging
- Designed and implemented a configurable rules engine to allocate insurance remittances across procedures, supporting default and clinic-specific business logic at scale
- Contributed to the design and implementation of a double-entry accounting system used to track all financial transactions across the platform, including payments, transfers, refunds, and taxes
- Enhanced platform security by implementing app-based MFA using AWS Cognito, improving account protection for patient and billing data
- Partnered directly with clinics to analyze complex billing workflows and translate operational requirements into scalable product improvements

Thomson Reuters

Software Engineer

Hybrid

Jan 2021 – Apr 2024

- Modernized legacy data workflows by migrating acquisition and distribution systems from on-prem infrastructure to AWS, enabling scalable processing of 250M+ documents annually
- Architected and implemented a secure upload portal using Spring Boot and AWS S3 that enabled external partners to submit datasets, triggering automated data processing pipelines for downstream systems
- Redesigned the court docket ingestion pipeline, reducing latency from 3 minutes to 15 seconds (12× faster) and enabling near real-time legal data delivery for customers
- Built a reusable performance monitoring library for distributed microservices (AWS Lambda, ECS) that enabled end-to-end timings of critical workflows, uncovering bottlenecks and duplicate processing that drove optimizations saving \$10k+ in cloud costs annually
- Designed a shared Python workspace in AWS S3 for Selenium-based web scraping pipelines used by 50+ developers, centralizing reusable modules and reducing duplicated logic across 1,000+ scraper projects

Maverick Software Consulting

Software Engineer Intern (Thomson Reuters)

Minneapolis, MN

May 2019 – Dec 2020

- Designed and implemented the first automated test suites for the CLEAR public-records platform using Java and TestNG, introducing automated code coverage and real-data regression testing across previously untested systems
- Developed CI-driven testing pipelines using Gradle and Jenkins to execute automated test suites against multiple applications, improving reliability and enabling early defect detection
- Created onboarding documentation and trained new engineers on internal tooling, coding standards, and secure handling of PII within large-scale public records systems

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Backend: Node.js, Spring Boot, Microservices, REST APIs

Frontend: React, Angular, Vite

Databases & Caching: PostgreSQL, DynamoDB, Redis

AWS: Lambda, S3, SQS, RDS, ECS, API Gateway, CDK, IAM, Cognito

Tools: Git, GitHub Actions, CI/CD, Docker, DataDog, Twilio, Selenium, Mockito, JUnit, TestNG

EDUCATION

Minnesota State University, Mankato

Bachelor of Science in Computer Information Technology

Mankato, MN
