EXPERIENCE

ChiroHD

Software Engineer

Remote

Apr 2024 – Present

- Architected ERA ingestion pipelines to process X12 835 remittance files into structured EOB records, eliminating manual data entry and improving billing accuracy for 2,500+ chiropractic clinics
- Built a queue-based Twilio messaging system with SQS and Lambda supporting 1M+ messages per month while tracking delivery and patient opt-in/out status
- Developed core components of a double-entry accounting system for tracking payments, transfers, refunds, and taxes across the platform
- Led a platform-wide migration from Node.js 20 to 24 ahead of AWS Lambda runtime deprecation, while replacing Serverless v3 with Open Serverless (osls) to save \$2.5K+ in annual licensing costs
- Designed and implemented a configurable rules engine for insurance remittance allocation, enabling clinics to customize billing behavior without requiring engineering changes
- Partnered directly with clinics to identify pain points in insurance billing workflows, shape product requirements, and translate operational needs into scalable product improvements

Thomson Reuters

Software Engineer

Hybrid (Eagan, MN)

Jan 2021 – Apr 2024

- Modernized legacy data workflows by migrating acquisition and distribution systems from on-premises infrastructure to AWS, enabling scalable processing of 300M+ documents annually
- Architected a secure upload portal using Spring Boot and S3, replacing manual partner data transfers with a self-service workflow that automatically triggered downstream processing pipelines
- Redesigned the court docket ingestion pipeline, reducing latency from 3 minutes to 15 seconds (12× faster), enabling near real-time legal data delivery for customers
- Built a reusable performance monitoring library for microservices running on AWS Lambda and ECS, uncovering workflow bottlenecks and duplicate processing that drove \$10K+ in annual cloud cost savings
- Designed a cloud-based Python workspace used by 50+ developers, centralizing reusable modules and reducing duplicated code across 1,000+ Selenium-based web scraping projects

Maverick Software Consulting

Software Engineer Intern (Thomson Reuters)

Mankato, MN

May 2019 – Dec 2020

- Designed and implemented the first automated test suites for the CLEAR public-records platform using Java and TestNG, introducing automated code coverage and real-data regression testing across previously untested systems
- Developed CI-driven testing pipelines using Gradle and Jenkins to execute automated test suites against multiple applications, improving reliability and enabling early defect detection
- Created onboarding documentation and trained new engineers on internal tooling, coding standards, and secure handling of PII within large-scale public records systems

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Frameworks: Node.js, React, Angular, Spring Boot

Databases & Caching: PostgreSQL, DynamoDB, Redis

Cloud & Infrastructure: AWS, Docker, CDK, CI/CD

Tools: Git, GitHub Actions, Datadog, Selenium

EDUCATION

Minnesota State University, Mankato

Bachelor of Science in Computer Information Technology

Mankato, MN
